برومبتات صناعة ريلز الموشن جرافيك

ثلاث طرق جاهزة للنسخ لإنشاء الفيديو من تسجيل صوتي أو نص أو فيديو شخصي
الطريقة الأولى من تسجيل صوتي إلى موشن جرافيكس
ارفع التسجيل الصوتي ثم انسخ البرومبت التالي

Act as an elite Motion Graphics Director, Creative Director, Editor, and Kinetic Typography Designer.
Your task is to turn the uploaded Arabic voice recording into a complete, professionally directed Instagram Reel.
Use the uploaded audio itself as the final soundtrack. Do not replace, regenerate, imitate, or modify the speaker's voice.

FIRST:

Listen to and analyze the entire Arabic audio before designing anything.
Understand:
- The meaning and message
- The speaker's tone and personality
- Important words and key ideas
- Natural pauses
- Changes in pace
- Emotional emphasis
- Where visual transitions should happen

THEN:

Build the entire video around the audio from scratch.
The audio is the MASTER TIMELINE.
Every scene, transition, graphic, caption, visual metaphor, camera movement, and typography animation must be synchronized with the spoken content.

FORMAT:

Instagram Reel
Vertical 9:16
1080 × 1920 px
Respect Instagram safe areas. Keep essential text and graphics away from areas commonly covered by UI elements.

CREATIVE DIRECTION:

Create a premium contemporary motion graphics style using a sophisticated mix of:
- Dynamic editorial collage
- Kinetic Arabic typography
- Graphic cutouts
- Icons and illustrations
- UI-inspired elements
- Shapes, textures, frames and layered compositions
- Creative visual metaphors

• Smooth camera movement
• Rhythmic transitions
• Motion that reacts naturally to the voice

Do not rely on generic stock footage.

Create or select visuals because they communicate what the speaker is saying.

Introduce a meaningful visual change approximately every 1–3 seconds, but do not make the edit chaotic.

ARABIC CAPTIONS:

Automatically transcribe the Arabic speech accurately.

Generate clean Arabic captions synchronized precisely with the audio.

Do not treat everything as ordinary subtitles.

Identify key words and important phrases and turn them into expressive kinetic typography.

Use three visual levels:

1. Hero Words

Large, bold, visually dominant words used for the strongest ideas.

2. Supporting Text

Short phrases that clarify or reinforce the spoken message.

3. Captions

Clean readable Arabic subtitles for continuity.

The typography must respect Arabic reading direction and remain highly legible on mobile screens.

EDITING LOGIC:

Let the speech control the edit.

When the speaker emphasizes a word, emphasize it visually.

When the idea changes, introduce a visual transition.

When the speaker speeds up, increase the editing rhythm.

When the speaker pauses, allow the composition to breathe.

When an abstract idea is mentioned, create a strong visual metaphor instead of showing random imagery.

QUALITY BAR:

The final Reel should feel like it was created by a top-tier motion design studio.

Avoid:

• Generic templates
• Random animations
• Decorative effects with no purpose
• Repetitive transitions
• Basic subtitles
• Overcrowded compositions
• Excessive text
• Visuals that do not relate to the speech

The finished video should feel intelligently designed around the Arabic voice recording, with strong storytelling, modern motion design, excellent pacing, and perfect audiovisual synchronization.

Go creatively ambitious, but keep every design decision purposeful.

الطريقة الثانية من نص عربي أو عنوان موضوع إلى فيديو
انسخ البرومبت واستبدل العبارة بين القوسين بموضوعك وتفاصيله إن لزم

Act as an elite Motion Graphics Director, Creative Director, Editor, and Kinetic Typography Designer.
Turn the Arabic text or topic provided below into a complete, professionally directed Instagram Reel with generated Arabic voiceover.
Create and deliver the finished video, not just a script, storyboard, or editing plan.

MY INPUT:

(اكتب موضوعك وتفاصيله إذا تبي)

FIRST: UNDERSTAND AND DEVELOP THE CONTENT

Identify whether my input is a complete script, a short idea, or a topic title.
- If I provide a complete script, preserve its meaning, wording, and dialect.
- If I provide a topic or an idea, develop it into a concise, engaging Arabic narration with a strong opening, a clear explanation, and a purposeful ending.
- Incorporate any details or constraints I provide.
- Use clear, conversational Arabic that is easy to understand.
- Avoid filler, repetition, exaggerated claims, and unnecessary introductions.
- Verify factual claims when needed, especially information that may have changed.
- Do not invent facts, numbers, quotations, or sources.

Choose a suitable length for the content, generally around 30–45 seconds for a topic-only input.
Preserve the natural length of a supplied complete script unless I request otherwise.
Make reasonable creative decisions and proceed without unnecessary follow-up questions.
Before creating the visuals, identify:
- The main message
- The intended tone
- Important words and key ideas
- Natural pauses
- Changes in pace
- Emotional emphasis
- Where visual transitions should happen

THEN: CREATE THE VOICEOVER

Generate a natural, expressive Arabic voiceover from the final narration.
- Match the dialect of my input when it is clearly indicated.
- Otherwise, use accessible, conversational Modern Standard Arabic.
- Choose a clear, warm voice appropriate for the topic.
- Avoid robotic pacing and exaggerated advertising delivery.
- Pronounce English names and technical terms correctly.
- Use purposeful pauses and natural emphasis.
- Do not read instructions or punctuation aloud.
- Use a synthetic narrator without imitating a real person.

Listen to and verify the entire generated recording before designing the video.
Check that the recording matches the narration and that pronunciation, pacing, and pauses are suitable.

If voice generation is unavailable, tell me clearly and ask me to upload a recording. Do not pretend that a voiceover was generated.

THE AUDIO IS THE MASTER TIMELINE

Once the voiceover is verified, lock it.

Build the entire video around the actual recording, not estimated reading times.

Every scene, transition, graphic, caption, visual metaphor, camera movement, and typography animation must be synchronized with the spoken content.

Let the final duration follow the natural voiceover length.

Do not rush the narration to fit an arbitrary duration.

FORMAT:

Instagram Reel

Vertical 9:16

1080 × 1920 px

Respect Instagram safe areas. Keep essential text and graphics away from areas commonly covered by interface elements.

CREATIVE DIRECTION:

Create a premium contemporary motion graphics style using a sophisticated mix of:

- Dynamic editorial collage
- Kinetic Arabic typography
- Graphic cutouts
- Icons and illustrations
- UI-inspired elements
- Shapes, textures, frames, and layered compositions
- Creative visual metaphors
- Smooth camera movement
- Rhythmic transitions
- Motion that reacts naturally to the voice

Do not rely on generic stock footage.

Create or select visuals because they communicate what the narrator is saying.

Introduce a meaningful visual change approximately every 1–3 seconds, but do not make the edit chaotic.

Use a coherent color palette and a consistent visual language throughout the Reel.

ARABIC CAPTIONS:

Create accurate Arabic captions using the final narration as the wording reference and the generated recording as the timing reference.

Align captions to the actual spoken phrases and words.

Do not distribute captions evenly across the timeline.

Do not treat everything as ordinary subtitles.

Identify key words and important phrases and turn them into expressive kinetic typography.

Use three visual levels:

1. Hero Words

Large, bold, visually dominant words used for the strongest ideas.

2. Supporting Text
Short phrases that clarify or reinforce the spoken message.
3. Captions
Clean, readable Arabic subtitles for continuity.
Respect Arabic reading direction, correct letter connections, and punctuation.
Keep all text highly legible on mobile screens.
Avoid excessive text and unnecessary duplication between the three levels.

EDITING LOGIC:

Let the speech control the edit.
When the narrator emphasizes a word, emphasize it visually.
When the idea changes, introduce a visual transition.
When the narrator speeds up, increase the editing rhythm.
When the narrator pauses, allow the composition to breathe.
When an abstract idea is mentioned, create a strong visual metaphor instead of showing random imagery.
Let visual elements transform, connect, or respond to one another when that helps explain the message.

SOUND:

Use the verified generated voiceover as the main soundtrack.
Keep speech clear and prominent.
Do not add music unless I request it.
Use subtle sound effects only when they support a specific visual action and do not compete with the narration.

QUALITY BAR:

The final Reel should feel like it was created by a top-tier motion design studio.
Avoid:
- Generic templates
- Random animations
- Decorative effects with no purpose
- Repetitive transitions
- Basic subtitles as the only visual treatment
- Overcrowded compositions
- Excessive text
- Visuals that do not relate to the speech
- Incorrect Arabic rendering
- Captions that appear before or after the spoken phrase

FINAL REVIEW:

Review the complete rendered video before delivery.
Verify:
- The content accurately reflects my topic or supplied text.
- The voiceover matches the final narration.
- Arabic and English terms are pronounced correctly.
- Captions match the actual recording.

• Typography is readable and correctly rendered.
• Visual transitions follow the speech.
• Essential content stays inside safe areas.
• Nothing is accidentally cropped or overlapping.
• The exported video plays correctly with its soundtrack.

Deliver the finished Reel as an MP4 file.

Go creatively ambitious, but keep every design decision purposeful.

الطريقة الثالثة فيديو نص على نص

ارفع فيديو تتحدث فيه ثم انسخ البرومبت ليظهر الموشن جرافيك في الأعلى وفيديوك في الأسفل

Act as an elite Motion Graphics Director, Creative Director, Editor, and Kinetic Typography Designer.
Turn my uploaded talking-head video into a complete, professionally directed split-screen Instagram Reel.
Create and deliver the finished video, not just a script, storyboard, or editing plan.

THE FORMAT: HALF GRAPHICS, HALF PRESENTER

Vertical 9:16
1080 × 1920 px
• TOP HALF: Purpose-built motion graphics illustrating what I am saying.
• BOTTOM HALF: My original uploaded video, showing me speaking.
Use an approximately equal 50/50 split throughout the Reel.
The top half should explain and visualize the message.
The bottom half should preserve my presence and connection with the viewer.

FIRST: WATCH AND LISTEN

Watch the entire uploaded video and listen to its complete audio before designing anything.
Understand:
• The meaning and main message
• My tone and personality
• Important words and key ideas
• Natural pauses
• Changes in pace
• Emotional emphasis
• Gestures and facial expressions
• Where visual transitions should happen
Automatically transcribe the Arabic speech accurately.

THE ORIGINAL AUDIO IS THE MASTER TIMELINE

Use the uploaded video's original audio as the final soundtrack.
Do not replace, regenerate, imitate, or alter my voice.
Do not change the speaking speed.
Preserve the complete spoken message and natural pauses.
Every graphic, caption, transition, visual metaphor, and typography animation must be synchronized with the actual speech.
Keep my original video and audio synchronized throughout.

BOTTOM HALF: PRESENTER COMPOSITION

Reframe my video carefully for the lower half.
• Keep my face clearly visible.
• Preserve natural proportions.
• Do not stretch the footage.
• Avoid cutting off my head or chin.
• Keep meaningful gestures visible when possible.
• Use subtle tracking only when needed to maintain framing.
• If the source cannot fill the panel without an awkward crop, use a designed background around it.

Never place captions, titles, stickers, or graphics over my face.
Do not replace me with an avatar, illustration, or generated person.

TOP HALF: MOTION GRAPHICS

Build the graphics from scratch around the spoken message.
Create a premium contemporary style using a sophisticated mix of:
- Dynamic editorial collage
- Kinetic Arabic typography
- Graphic cutouts
- Icons and illustrations
- UI-inspired elements
- Shapes, textures, frames, and layered compositions
- Creative visual metaphors
- Smooth camera movement
- Rhythmic transitions

Do not rely on generic stock footage.
Create or select each visual because it communicates what I am saying.
Introduce a meaningful visual change approximately every 1–3 seconds, without making the edit chaotic.
Design specifically for the upper half. Do not shrink a full-screen composition into a small panel.
Use bold, readable elements with enough breathing room.

VISUAL RELATIONSHIP BETWEEN THE TWO HALVES

The graphics and presenter should feel like one coherent composition.
- Use a consistent palette, typography, and framing.
- Keep the divider clean and restrained.
- Synchronize graphic reactions with my words and gestures.
- Keep animated elements within the upper panel.
- Maintain a stable presenter panel while the graphics develop above it.
- Avoid distracting movement in both halves at the same time.

ARABIC CAPTIONS AND TYPOGRAPHY

Generate accurate Arabic captions synchronized with the actual recording.
Use three visual levels:

1. Hero Words
Large, bold words in the upper panel for the strongest ideas.

2. Supporting Text
Short phrases in the upper panel that clarify the message.

3. Captions
Clean, readable Arabic subtitles for continuity.
Place captions in a dedicated strip near the bottom of the upper panel, immediately above the divider.
Reserve space for this strip so captions do not cover important graphics or spill onto my face.
Keep captions short, preferably one line and no more than two when necessary.
Respect:
- Arabic right-to-left reading direction
- Correct Arabic letter connections
- Accurate punctuation
- Clear mobile readability
- Precise phrase and word timing

Do not distribute captions evenly across the timeline.

Align them to the actual speech.
Avoid unnecessary repetition between hero words, supporting text, and captions.

EDITING LOGIC

Let my speech control the edit.
When I emphasize a word, emphasize it visually.
When the idea changes, introduce a visual transition in the upper panel.
When I speak faster, increase the graphics' rhythm.
When I pause, allow the composition to breathe.
When I mention an abstract idea, create a meaningful visual metaphor instead of showing random imagery.
Let graphic elements transform, connect, or respond to one another when this helps explain the message.

SAFE AREAS

Respect Instagram safe areas across the entire frame.
Keep essential content away from:
• The top interface area
• The right-side reaction buttons
• The bottom caption and account-information area
Position my face comfortably inside the visible area of the lower panel.

SOUND

Keep my original voice clear and prominent.
Do not add music unless I request it.
Use subtle sound effects only when they support a specific graphic action and do not compete with my speech.

QUALITY BAR

The final Reel should feel like it was created by a top-tier motion design studio.
Avoid:
• Generic templates
• Random animations
• Decorative effects with no purpose
• Repetitive transitions
• Basic subtitles as the only graphic treatment
• Overcrowded upper-panel compositions
• Excessive text
• Visuals unrelated to the speech
• Captions or graphics covering my face
• Awkward cropping or stretched footage
• Incorrect Arabic rendering
• Audio and video synchronization errors

FINAL REVIEW

Review the complete rendered video before delivery.
Verify:
• The original voice and spoken message are preserved.
• My lips remain synchronized with the audio.
• My face stays visible and unobstructed.
• The 50/50 composition remains consistent.

• Graphics accurately illustrate the spoken ideas.
• Captions match the actual words and timing.
• Arabic text is correctly rendered and readable.
• Essential content stays within safe areas.
• No unintended cropping or overlapping occurs.
• The exported video plays correctly with its soundtrack.
Deliver the finished Reel as an MP4 file.
Go creatively ambitious, but keep every design decision purposeful.

ملحوظة اختيارية (خاصة بـ Claude)
إذا تبي **Claude** يفهمك ويستجيب أسرع، اكتب له اللي كنت تقوله بالڤويس كنص (text).
